Модуль Slicer

Slicer завантажує набір даних МРТ простати

In the past decade, image segmentation has been powered by the development of deep learning algorithms (e.g. nnUnet by the German Cancer Research Center (DKFZ)/Helmholtz Research).

AI-powered segmentation tools can reduce the segmentation time and provide more reproducible results.

AI Terminology

A is an AI algorithm that was trained to perform a specific task (e.g. brain tumor segmentation model).

The Weights of an AI model are small numbers that determine how much importance the model gives to different image features.

During the Training phase, a Model learns patterns from data labelled by experts and adjusts its weights to improve its predictions.

During the Validation/Test phase, the model is evaluated on a separate set of data not used during the Training phase.

During Inference, the model is applied to new datasets to perform the specific task it was trained for.

3D Slicer AI Workshop

This tutorial focuses on running inference tasks using various pretrained AI models for automated segmentation of anatomical and pathological structures.

MONAIAuto3DSeg Slicer extension

This tutorial uses the pre-trained models of the MONAIAuto3DSeg Slicer extension.

The tool is designed to work on laptops or on average desktop computer without a GPU.

Slicer AI Tutorial: Segmentation Tasks

Segmentation Task #1: Prostate.

Segmentation Task #2: Brain Glioma.

Segmentation Task #3: Whole Body Segmentation.

**Slicer показує
результат сегментації
простати на основі
штучного інтелекту**

Завантаження

dataset4_BrainMRI_Glioma

AI-based Segmentation of Peripheral Zone (PZ) and Transition Zone (TZ) of the prostate on T2-weighted MRI Images.

Dataset:

msd_prostate_01-t2

msd_prostate_01-adc

AI Segmentation Task

#2: Brain Glioma

Зріз відображає результат сегментації на основі штучного інтелекту за допомогою швидкої сегментації всього тіла TS1

AI-based Segmentation of Neoplasm, Necrosis and Edema in Brain MRI images.

Datasets:

- 1) BraTS-GLI_00005-000-t1n (T1-weighted)
- 2) BraTS-GLI_00005-000-t1c (T1-weighted post-Gd)
- 3) BraTS-GLI_00005-000-t2w (T2-weighted)
- 4) BraTS-GLI_00005-000-t2f (T2-FLAIR)

AI Segmentation Task

#3: Whole Body Segmentation

AI-based Segmentation of the whole
body.

Dataset:

CT_ThoraxAbdomen

Conclusion

The 3D SlicerMONAIAuto3DSeg extension provides fast AI-based segmentation of anatomical and pathological structures.

The module can run on standard laptop and desktop computers with no GPU.

ПОДЯКИ

The 3D Slicer internationalization project and the 3D Slicer for Latin America project have been made possible by two CZI Essential Open Source Software for Science (EOSS cycle 4 & 5) grants.
